PCR Series

Optimum Accuracy and Reliability

Solution for Accuracy and Reliability of PCR Results

Gene Diagnosis • Drug Discovery • Genomic Research

GEB Exclusive DRM Dual Resin PCR series

DUAL RESIN PCR products provide greater ease of closure and increased seal integrity; "ZERO" evaporation and reduced "edge-effect" prevent aerosol contaminants and subsequent false positive PCR results.

GEB R&R Low Retention PCR series

GEB's **R&R** Low Retention PCR Tubes/Plate provide you a super uniformity and consistent retentionless surface to create a **RETENTIONLESS RECOVERY** effect during your samples and reagents handling.

GEB keeps researching and developing technique for less sample retention and less electrostatic violence and better leakproofness so as to guarantee the PCR result accurate.

Minimize sample and reagent retention
Guarantee reaction system accuracy and precision

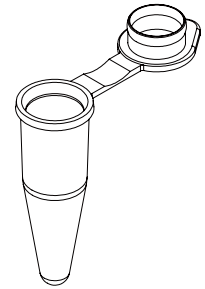

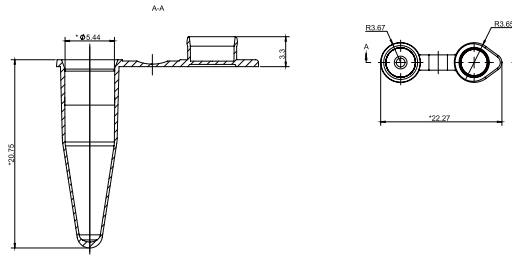

Provide a better seal effect
Be more flexible to fit robotic pipetting head or manual pipettors

Sponge Swab

FOR ORAL FLUID AND CELL COLLECTION SYSTEM

This sponge swab is designed to collect oral fluid and cells. The swab is used like a toothbrush. Firstly open the package and remove the tube.

Oral fluid or cells are collected by rubbing the sponge firmly along the gum (at the base of the teeth if present) until the sponge swab is wet. It takes about one minute.

Replace the swab in the tube and close the cap. Return sample to the laboratory for processing

This product can do not need to use the centrifuge and can recycle oral liquid and cells, operation is as follows

Place the swab upside down in the tube

Close the cap, the cap can squeeze liquid

Liquid recovery can be achieved >93%
